## EHS Software Solutions

Decide's EHS business practice helps our customers leverage technology to improve their business operations and risk management. We have been working in the EHS space since 2005 and have multiple resources active in this market.

We develop, execute, and incorporate optimal solutions via technology that make sense for each individual client. We have worked with our client base in four continents.

### Our services in EHS include:

- EHS Systems Integration and Implementation
- Project Management
- EHS Systems Support
- Risk Management and Compliance Consulting
- EHS Software Selection
- EHS Dashview
- WorkFlow Configurator for IMPACT

EHS Dashview is our Dashboard that sits on top of your EHS systems to customize your views at a Corporate, Site or individual level.

We have developed, and use on our projects, a proprietary tool set to speed implementation and reduce errors during the process. These tools work with some major EHS software vendors.

Whether your company is a single facility or a multinational corporation, Decide understands your needs and can provide the right solution.

When you want to turn your software or app concept into a reality, Decide can deliver the plan to get there.
