

# 'decide,

## EHS DASHVIEW

In the 10 years we have worked with IMPACT ERM customers, one of the biggest topics we hear can be summed up:

“ I spend hours each week figuring out what are the important items to tend to. I have to look at multiple reports and screens to know what to do. I need a single place to go for this. ”

We have listened and delivered. Decide Consulting has built a dashboard that runs as an add-on to IMPACT ERM. It can show you at a glance things such as

- Total Incident Reportable Rates
- Recordable Spills and Releases
- Safety Pyramid
- Open MOCs
- And many others

These views are available at a Company, Site or Individual level. The dashboard is installable on your servers and can be made accessible to any EHS personnel in your organization. Decide is making this available at a low cost entry point and can be implemented in as little as a few weeks.
